DATE MAILED: 05/03/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/680,998	Applicant(s) PEIFFER ET AL.	
	Examiner Ramy M. Osman	Art Unit 2157	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 March 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-42 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-42 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Status of Claims

1. This communication is responsive to the RCE amendment filed on March 3, 2005.

Claims 1-42 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1,5-8,9,10,13,16-19,23,24,27,30-33,35,40 and 42 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785).**

4. In reference to claims 1,19 and 33, Lafe teaches a method, a networking device and a corresponding system for transferring web page source data between a web server and a remote client over a computer network, the computer network including a wide area network, the method comprising:

receiving a request for the web page source data from the remote client at an acceleration device (column 4 line 63 – column 5 line 5);

obtaining original web page source data from the web server, the original web page source data containing renderable character data and non-renderable character data, the

Art Unit: 2157

renderable character data (column 5 lines 30 & 34) being data that affects the presentation of the web page by a browser, and the non-renderable character data (column 5 line 35) being data that does not affect the presentation of the web page by a browser, the original web page source data being in a markup language format (column 5 lines 1-17 & 28-52);

filtering at least a portion of the non-renderable character data from the requested web page source data, thereby creating modified web page source data (column 5 lines 33-43); and

transmitting the modified web page source data to the remote client over the computer network (column 5 lines 1-17).

Lafe fails to explicitly teach wherein the acceleration device is a server-side acceleration device positioned on the computer network intermediate the remote client and the web server and intermediate the web server and the wide area network. However, Jungck teaches a data center (which is an acceleration device) in a reverse proxy configuration (which means server-side, intermediate the web server and the Internet) that compresses web files for the purpose of accelerating web transmissions to a work station (remote client) (column 2 lines 21-25, column 3 line 65 – column 4 line 12, column 6 lines 12-26 and figure 2).

It would have been obvious for one of ordinary skill in the art to modify Lafe by making the acceleration device a server-side acceleration device positioned on the computer network intermediate the remote client and the web server and intermediate the web server and the wide area network as per the teachings of Jungck for the purpose of accelerating web transmissions to a work station.

Art Unit: 2157

5. In reference to claim 5, Lafa teaches the method of claim 1, further comprising, compressing the modified web page source data before sending it to the remote client (column 5 lines 1-10).
6. In reference to claim 6, Lafa in view of Jungck teach the method of claim 1, wherein the web server and the acceleration device are connected by a LAN (Jungck, column 6 lines 20-25).
7. In reference to claim 7, Lafa teaches the method of claim 1, wherein the acceleration device and remote client are connected by a WAN (Lafa, column 6 lines 20-38).
8. In reference to claim 8, Lafa in view of Jungck teach the method of claim 7, wherein the WAN is the Internet (Jungck, column 1 lines 25-30 and column 4 lines 24-26).
9. In reference to claims 9 and 23, Lafa teaches the method and networking device of claims 1 and 19 respectively, wherein the non-renderable character data is character data compatible with the HTTP data transfer protocol (column 5 lines 28-53).
10. In reference to claims 10 and 24, Lafa teaches the method and networking device of claims 9 and 23 respectively, wherein the non-renderable character data is HTML data (column 5 lines 28-53, Lafa inherently teaches the use of HTML).
11. In reference to claims 13,27 and 35, Lafa teaches the method, networking device and system of claims 10,24 and 33 respectively, wherein the non-renderable character data includes comments (column 5 lines 28-53, Lafa teaches HTML which inherently has comments in it).
12. In reference to claims 16 and 30, Lafa teaches method and networking device of claims 10 and 24 respectively, wherein the non-renderable character data includes commands not interpretable by the remote client (column 5 lines 33-37).

Art Unit: 2157

13. In reference to claims 17 and 31, Lafe teaches the method and networking device of claims 1 and 19 respectively, wherein the filtering and transmitting of the modified web page source data over the computer network to the remote client are performed in less time than the original web page source can be directly transmitted from the web server to the remote client (column 5 lines 5-17).

14. In reference to claims 18 and 32, Lafe teaches the method and networking device of claims 1 and 19 respectively, wherein the file size of the modified web page source data is smaller than the original web page source data (column 5 lines 5-17).

15. In reference to claims 40 and 42, Lafe teaches the system of claim 33, wherein the acceleration device is configured to cache the modified web page source data; and to compress the web resource in real-time before transmission to the remote client (Jungck, column 5 lines 20-45 and column 6 lines 10-30).

16. Claims 2 and 39 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785) in further view of Bodin et al (US Patent No 6,311,223).

17. In reference to claims 2 and 39, Lafe teaches the method and system of claims 1 and 33, but fails to explicitly teach wherein filtering further includes filtering tags of the web page source data by rewriting tags of the web page source data in lowercase. However, Bodin teaches tokenizing HTML tags to reduce the quantity of data in the file for effective transmission of HTML files (Summary, column 4 lines 25-47 and column 6 lines 20-32).

It would have been obvious for one of ordinary skill in the art to modify Lafe by filtering tags of the web page source data by rewriting tags of the web page source data in lowercase as

Art Unit: 2157

per the teachings of Bodin so that the quantity of data in the file is reduced for effective transmission of HTML files.

18. Claims 3,4,20 and 41 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785) in further of Brothers (US Patent No 6,438,125).

19. In reference to claims 3 and 41, Lafe teaches the method and system of claims 1 and 33 above, but fails to explicitly teach further comprising, after transmitting the modified web page source data to the remote client, transmitting the original web page source data to the remote client. However, Brothers teaches after transmitting a modified web page to the remote client, transmitting the original web page source data to the remote client for the purpose of flexibly viewing web pages (column 1 lines 48-62, column 2 lines 15-46 and column 5 lines 12-32).

It would have been obvious for one of ordinary skill in the art to modify Lafe to by transmitting a modified page to a client, and transmitting the original page to the client in response to another request from the client for the original page as per the teachings of Brothers for the purpose of flexibly viewing web pages.

20. In reference to claims 4 and 20, Lafe teaches the method and the networking device of claims 3 and 19 respectively, but fails to explicitly teach wherein the original web page source data is sent to the remote client in response to a subsequent request from the remote client for the original, unfiltered version. However, Brothers teaches wherein the original web page sent to the remote client is in response to a subsequent request from the remote client for the original, unfiltered version for the purpose of flexibly viewing web pages (column 1 lines 48-62, column 2 lines 15-46 and column 5 lines 12-32).

It would have been obvious for one of ordinary skill in the art to modify Lafe wherein the original web page source data is sent to the remote client in response to a subsequent request from the remote client for the original, unfiltered version as per the teachings of Brothers for the purpose of flexibly viewing web pages and so that the modified version can be viewed before the original version of the web data.

21. Claims 11,12,25,34 and 36 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785) in further of Isaac et al (US Patent No 6,424,981).

22. In reference to claims 11 and 25, Lafe teaches the method of claims 10 and 24 respectively, wherein the non-renderable character data is in the ASCII format. "Official notice" is taken that ASCII is old and well-known in the art, as taught by Isaac who teaches that HTML files contain ASCII characters (column 1 lines 20-50).

It would have been obvious for one of ordinary skill in the art to modify Lafe to state that HTML documents are ASCII coded documents as per the teachings of Isaac because this is a standard for HTML.

23. In reference to claims 12,26,34 and 36, Lafe teaches the method of claims 10,24 and 33 respectively, wherein the non-renderable character data includes white space. "Official notice" is taken that white space is old and well-known in the art, as taught by Isaac who teaches ASCII coded characters which includes space characters (column 1 lines 20-50 and column 6 lines 55-67).

Art Unit: 2157

24. Claims 14,15,28,29,37 and 39 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785) in further of Edlund et al (US Patent No 6,546,388).

25. In reference to claims 14,28 and 37, Lafe teaches the method of claims 10,24 and 33, but fails to explicitly teach wherein the non-renderable character data includes meta tags. "Official notice" is taken that meta tags are old and well-known in the art as being HTML tags that describe some aspect of a web page (via keywords) that can then be used by a search engine for indexing, and is taught by Edlund (Abstract and column 2 lines 5-50).

It would have been obvious for one of ordinary skill in the art to modify Lafe by stating that HTML includes meta tags as per the teachings of Edlund because HTML documents include keywords to be used by search engines for indexing.

26. In reference to claims 15,29 and 38, Lafe teaches the method of claims 10,24 and 33, but fails to explicitly teach wherein the non-renderable character data includes keywords configured to be interpreted by a search engine.. "Official notice" is taken that meta tags are old and well-known in the art as being HTML tags that describe some aspect of a web page (via keywords) that can then be used by a search engine for indexing, and is taught by Edlund (Abstract and column 2 lines 5-50).

It would have been obvious for one of ordinary skill in the art to modify Lafe by stating that HTML includes meta tags as per the teachings of Edlund because HTML documents include keywords to be used by search engines for indexing.

Art Unit: 2157

27. Claims 21-22 rejected under 35 U.S.C. 103(a) as being unpatentable over Lafe et al (US Patent No 6,449,658) in view of Jungck (US Patent No 6,728,785) in further view of Burget (US Patent No 6,557,005).

Lafe teaches the method of claim 21 above, but fails to explicitly teach wherein the method includes a network communications program logic stored on an ASIC. However, Burget teaches a program for Internet communication stored on an ASIC, as a known medium of storage.

It would have been obvious for one of ordinary skill in the art to modify Lafe to make the communications program which performs the above method to be stored on an ASIC as per the teachings of Burget as it is a known medium of storage in the art.

Response to Amendment

28. The examiner acknowledges amendment filed on 3/3/2005, where applicant amended claims 1,19 and 33. No claims were added or cancelled.

Response to Arguments

29. Applicant's arguments with respect to claims 1-42 have been considered. A response to the arguments will not be given because they are moot in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ramy M. Osman whose telephone number is (571) 272-4008. The examiner can normally be reached on M-F 9-5.

Art Unit: 2157

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571) 272-4001. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
